FOREWORD

This report is the fourteenth consecutive annual report issued by NASIS on information systems in state government. The report is a comprehensive compilation indicating the current status of information systems in the three branches of state government.

Some form of automated information collection, storage and retrieval is now evident in every office of state government. Technology continues to make automated information systems more viable by reducing the cost per workstation. Technology also provides us with the ability to select hardware and software with the proper functionality for each individual workstation. As we are taking advantage of this advancing era of technology, telecommunications is becoming an integral part of the information system. We are no longer satisfied with just processing data and creating text; we now need to communicate this information over high speed networks. NASIS has recognized the growing importance of telecommunications, and at the last annual meeting, the members of NASIS created a standing committee on telecommunications.

This report is the last which will be printed in the current format. A new format has been approved which will be easier for the states to complete, as well as provide better information to the user. The new report will cover office automation and telecommunications in greater detail to give a more complete picture of information processing in state government. NASIS is continuing to improve this report to ensure that it remains a valuable reference for all users.

This report is only possible through the dedicated effort of the state members of NASIS and the NASIS staff. I wish to express my thanks to all those who have made this report possible.

Jim Heck
President, NASIS
Bismarck, North Dakota
March 1984

THE NATIONAL ASSOCIATION FOR STATE INFORMATION SYSTEMS -- AN OVERVIEW

NASIS, the National Association for State Information Systems, is an organization having as its members the 50 states of the United States, its territories, and the District of Columbia. The Canadian provinces of Alberta, British Columbia, Ontario, Quebec and Saskatchewan participate as associate members, while a correspondent relationship is maintained with many other foreign nations. NASIS functions as a cooperating agency of The Council of State Governments and maintains close working relationships with the National Governors' Association, the National Conference of State Legislatures, the National Association of State Budget Officers, and many other state and local government-oriented organizations. NASIS' central purpose is assistance to state governments in providing effective service to their citizenry and in making the best possible use of their information systems resources.

The NASIS state representatives are today involved in a much different task than they were in years past. The need for information systems is now clear and their usage has been accepted. The environment in which they manage is a rapidly changing one in two respects: the technological resources which they direct, and the atmosphere in which they provide that direction. Communications are becoming as much a part of state data processing as the CPUs themselves. Data and voice communications and the networks which they use are integral parts of distributed data processing, message store and forward and electronic mail, all of which are the capabilities of today and not the future. The computers themselves demand a constant knowledge update in order to determine the optimum mix between so-called mainframes, minis, micros and/or personal computers that will provide the most effective service to the end user. The automated office demands the closest cooperation between it and the other information resources. As you will see in this report change is also the byword of the operating environment. Personnel management demands the utmost attention and skill; budget constraints are being felt as never before, and all of this is the face of a new and not yet totally defined workload which will emerge from the implementation of the new federalism with its very fundamental changes in intergovernmental relations and governmental service delivery systems. To NASIS and its members, the challenge is the planning for the future and the managing of change for today.

NASIS ORGANIZATION

NASIS is composed of four regions the pattern of which follows that of other state organizations. The regional organizations hold at least one regional meeting a year, featuring speakers and workshops. The NASIS annual meeting is held in August.

Each member state is invited to designate a prime contact in each of the executive, legislative, and judicial branches. Its bylaws provide that the vote of each state is shared equally among representatives of each of three branches of any state. These individuals are responsible for providing the leadership for the NASIS program. From among this group is selected the 19-member Executive committee, which consists of two directors elected by each region, chairpersons of the six standing committees, and at least one representative each from the legislative and judicial branches, the president, past president, president-elect, and secretary treasurer.

RESULTS OF NASIS

NASIS and its staff provide an ongoing mechanism for the support of all its members and associates. The communication linkage it has established is invaluable in the provision of the mutual support function that over the years has helped its members in solving the myriad of problems and challenges which they face. It has been the means of obtaining assistance in the development of new systems and applications, of learning of new management techniques and of getting assessments of new hardware and software offerings. Its publications have been directed to questions and topics of current interest to the membership. The staff provides daily support to the states on a wide scale of subjects as well as conducting the day-to-day administration of the organization, prepares and publishes this annual report, assists in the planning and conduct of annual and regional meetings, maintains liaison with other state-oriented organizations and federal agencies and provides support to ongoing NASIS projects. The funds contributed by the states are used in the support of those activities which are of a nature to be of use to all member states. A major part of NASIS' help to the states is a result of efforts of its standing committees.

The **Committee on Federal-State-Local Liaison** has been working with the Office of Management and Budget (OMB) in the final implementation of the Federal Assistance Award Data System and its inclusion in the Consolidated Federal Funds Report to inform the state of the amount and kinds of federal funds flowing to it. It is also working with OMB in the redraft of certain of its circulars pertaining to information systems. Several NASIS representatives serve on the National Bureau of Standards State and Local Government Planning Committee for the exchange of information on new developments in data and communications handling. In addition, NASIS maintains ongoing liaison with numerous federal executive and legislative branch organizations.

While its **Committee on Security and Privacy** has seen its efforts in drafting model legislation result in the publication of the drafts in national journals and in adoption of such acts in a number of states, there is still a real concern that not enough has been done to avert a major wrongdoing.

Dramatic changes in technology accompanying a total restructuring of the communications industry has caused NASIS to create a permanent standing **Committee on Telecommunications**. Among the issues this committee is looking at are the effects of divestiture, model management structures and policies to deal with the changed environment, cost containment and the development of a central information repository concerning the entire gamut of communications technology.

Other committees such as **Standards, Research and Education and Management Policies and Procedures** contribute guidelines, information exchange programs and studies of information systems.

In addition to the output of its committees NASIS provides several regular publications to its membership including this report which has been produced for 14 consecutive years. A biennial *Newsletter* carries feature articles on new state developments and NASIS activities. A bulletin is produced on a bimonthly basis for use as a means of communication between NASIS members. It is used in seeking assistance on a variety of subjects in the information systems field. It makes note of changes in member representation and announces new publications and standards.

Meetings. One of the more effective means of communications between the member states of NASIS and the three branches within those states has been the holding of regional and annual meetings. The regional meetings provide a vehicle whereby not only the information systems administrator but also his chief subordinates have a chance to exchange ideas with their counterparts from surrounding states. They provide an opportunity for "show and tell" and for the development of mutual assistance programs. The annual meeting is an opportunity for the membership to stay abreast of the policies, both state and federal, which will impact their responsibilities in the future as well as for being made aware of the future technological state-of-the-art in the two-to-five year timeframe.

THE FUTURE

Never in the history of man has his environment been subject to the rate and enormity of change such as he has experienced in the computer and communication age over the past 10 years. The marvels of the "chip" and miniaturization, the movement of information at almost the speed of light, the seemingly instantaneous world-wide communications through the use of satellites are but the most apparent technological changes.

Along with this acceleration of technological change there has been a concomitant speeding-up of change in the philosophy of managing governmental programs and organizations. Indeed those that are created in one legislative session may well be abolished in the next. Long term organizational stability may well be the exception rather than the rule.

It is in this arena of innovation and variation that the state information systems manager seeks to make the products of government more effective and therefore of more value to its citizens.

The demands to stay current in a volatile field and at the same time meet the changing clientele needs often impose more psychological than intellectual stress. It is a challenging undertaking but also a rewarding one.

The future then can be most simply defined as change.

1. INTRODUCTION

1. INTRODUCTION

OBJECTIVES

This report contains the results of the fourteenth annual survey of the states by the National Association for State Information Systems (NASIS). The objectives of the annual report are:

- To present an annual "snapshot" of the state-of-the-art in information systems and other computerization in the states,
- To provide data for analysis of trends in state information systems, and
- Most important, to assist in increasing the exchange of information among the states on (a) information systems legislation, policies, management practices and problems, and funding; and (b) actual systems design and computer programs for use "as is" or as necessarily revised.

Separate sections on judicial and legislative applications, computer installations, communications and data entry equipment, and off-line peripherals are carried in appendices A, B, C, and D.

In order to achieve these objectives, data have been sought through survey forms sent to all states in the years 1970 through 1983.

DATA SURVEYED

The classes of data covered include:

1. **Coordination and control.** The extent of central coordination and control of information systems and computerization was identified, including the basis for authority and the information systems functions to which the authority applies.

2. **Computer inventory.** Computer inventory was classified by size. In addition, details regarding state agency computer configurations were collected and are included in Appendix D. Finally, data were collected about software packages used in the information systems function itself.

3. **Personnel.** Information concerning personnel costs and personnel by job categories was collected. For state agencies, these were subdivided between central information systems authority and all others.

4. **Training.** Information regarding training courses and costs was collected. In addition, details were collected regarding expected training assistance to local government by state agencies.

5. **Difficulties experienced in EDP management.** States were asked to rank order a list of problem areas largely outside of their control. In addition, states were asked to rank order a separate list of problem areas within their control. Finally, the items on each list were evaluated as to whether the problems had become more serious or less serious than they were at the time of the last survey.

6. **Formalized plans and documentation.** Information was collected concerning the existence of state information systems plans and the currency of those plans, procurement procedures, and systems, programming, and documentation standards.

7. **Intergovernmental information systems relationships.** States were asked to indicate the nature of their general responsibility in various areas concerning information systems and computerization in local governments. States were also asked to identify any state agencies exercising control or jurisdiction over information systems or computerization development in five specific functions of local government and to specify the type of control. Finally, states were asked for details regarding any formal or informal intergovernmental organizations existing to promote intergovernmental information systems. A second part of this section deals with federal assistance in the development of state data processing systems.

8. **Applications.** Details were collected regarding applications. The responses to this are presented in Appendix A.

9. **Funding.** States were asked to provide information regarding the amount of funds budgeted for information systems and computerization. This was classified according to hardware, personnel, consultants, software and other. Details regarding the source of funds (i.e., revolving fund or direct appropriation) and the bases for billing users for computer-related costs were also collected.

10. **Data security and privacy.** Information was sought on some of the basic problems relating to security and privacy. The security questions had to do with physical and data security procedures. Privacy questions were aimed at obtaining an overview of the status of legislation and estimates of public concern.

11. **Transfer projects.** Specific examples of transfer of application between states were requested and obtained and are included in this report.

CAVEATS

The data in this report must be used with caution. Some of it is obviously unequivocal and factual (for example, the part of Table 1 which shows the basis of authority). Some data however, may reflect definitions that are not standard (for example, the part of Table 1 which delineates the type of control). As in earlier years, the scope of this survey was deliberately limited in an effort to encourage response. Responses, either complete or partial were received from all 50 states. The data used is the most recent available to NASIS.

Further, certain responses may not be totally accurate. Respondents were urged, especially in funding questions, to estimate where necessary rather than to delay responding. It has been suggested that one probable result is that the states with good systems for internal costing will show relatively higher costs for similar information systems operations than will states without a system for aggregating total costs.

2. OBSERVATIONS

2. OBSERVATIONS

This section serves as the executive summary for the findings contained in the following section on detailed responses. A general observation regarding this year's report is that the past severe financial conditions have made themselves felt on state information systems in the form of sharply curtailed spending programs. Many states have experienced staff reductions, salary increases have been limited or non-existent, and the use of consultants has been sharply curtailed.

1. States are apparently adopting the information resource management concept as a number of them revamp organizational structures creating a single directorate for data processing, office automation and communications.
2. Rapid growth in the use of minis and micros continues.
3. The creation of networks continues to move ahead.
4. State data processing salaries show small increases.
5. Management takes up a larger percentage of all data processing jobs.
6. Systems analysts and programmers continue their growth as a percentage of the organization.
7. Consultant expenditures were sharply curtailed.
8. More training being done on an in-house basis.
9. Lack of management support overtakes the need for qualified personnel as the number one external problem plaguing the information system manager.
10. High costs and programming foul-ups take top priority as the internal problems the manager must resolve.
11. More states keep their master plans current.
12. Operations guidelines are less prevalent than statewide standards.
13. The level of federal assistance to state information remains at a lowered level.
14. More states report the use of software packages in the management of the data processing and communications functions.
15. The method of financing data processing activities remains very stable.
16. The states are estimated to spend \$2.1 billion on the information systems function. The growth rate for the costs has sharply declined.
17. The percentage of the data processing budget devoted to communications doubles while monies for consultants is sharply reduced.
18. Support for security measures remains a big question mark.

3. RESPONSES

3. RESPONSES

COORDINATION AND CONTROL

(Tables 1 and 2)

The move toward some form of information resource management continues as states review their current organization structure. The impact of the changes in the structure of the communications industry is of great concern to the information manager.

The type of authority which the several states use does not seem to have varied a great deal during the period covered by this report.

(9) Excludes Auditor of State.

(10) Excludes institutions of higher education.

(11) Excludes legislature.

COMPUTER INVENTORY**(Tables 3-6)**

While the absolute numbers of large size CPUs installed continues to increase they make up a smaller percentage of all installations due to the extremely rapid increase in the number of minis and micros installed.

Future reports will contain separate data on mini and micro (including PCs) computers. All other mainframes will be classified as to the MIPS capacity of machines.

PERSONNEL
(Tables 7 and 8)

Once again there has been an increase in the percentage of positions classified as management. The presumption is that this is brought on by such activities as telecommunications and security which are being given increasing attention in state information systems. The increase in systems analysts and programmers is divided equally between the central authority and all other state agencies. Again operations and data entry personnel decrease as a percentage of the total information systems complement.

While there are some increases and decreases in the absolute maximum and minimum salaries for the various classes the averages shown indicate a small overall increase.

<i>Category</i>	<i>Salary Ranges*</i>		
	<i>High</i>	<i>Average</i>	<i>Low</i>
Management			
Third Level	\$58,000	\$46,500	\$33,000
Second Level	46,500	36,225	25,310

CONSULTANTS

(Table 9)

Sharp reductions in the number of consultant projects and the dollars expended therefore must be attributed to the severe spending constraints the states have had to impose in light of large budget deficits which most of them projected. Only two areas showed any significant increases; namely revenue and employment security. It can be concluded that the very economic conditions which caused the down-turn in other areas would be the reason for the increases in these areas.

Table 9
CONSULTANT EXPENDITURES
1983-1984

Function	Number of projects		Cost (in thousands)	
	1983 (Actual)	1984 (Est.)	1983 (Actual)	1984 (Est.)

Total	75	53	\$6,788	\$4,645

TRAINING
(Tables 10-12)

While the number of students taking courses shows a slight increase the monies expended for training show a slight decrease in both the actual and projected years. The major reason for the decreased spending is a sharp reduction in tuition payments being somewhat offset by an increase in spending for trainers. A conclusion from these facts is that the states have made the initial payment for course materials in previous years and now can beef up their in-house training programs.

Table 10

RANKING OF DIFFICULTIES

(Tables 13 and 14)

The data contained in these tables is intended to portray, in order of seriousness, the factors that deter efforts to achieve the most effective use of the states' information systems resources. Table 13 reviews those conditions which are external to the information systems manager and over which he has little control. Table 14 depicts those internal problems for which the manager has responsibility and therefore must work to resolve. Both tables also indicate whether or not the problem is becoming more serious.

External Problems

While the same five problems ranked at the top of the managers' concerns there was a significant shift in the number one problem with management commitment moving from number four to the first place. Along with this change was the problem of management interest moving from ninth to sixth place. It may be that other program woes brought on by sharp budget cuts demanded a larger share of management's attention.

Three external problems not included in the regular format but reported by several states should be noted. They were the lack of communications policies, the need for microcomputer policies and lack of concern for cost controls. In all cases the respondents considered these problems to be getting more serious.

Internal Problems

Overruns may be the name of the game where the manager is responsible for problem resolutions. These are overruns in cost estimates and program delivery dates. They must also be directly responsible for the other two leading internal problems, namely costs being too high and expanding programming backlogs.

In this area several states cited problems not normally contained in the report and which were growing more serious: namely security, disaster recovery planning and poor systems performance.

Table 13
EXTERNAL PROBLEMS RELATED TO INFORMATION SYSTEMS
1979-1983

Problem category	Aggregate rank					Seriousness of the problem 1983	
	1979	1980	1981	1982	1983	More serious	Less serious

FORMALIZED STATE PLANS AND STANDARDS
(Table 15)

Thirty-five states now report having a statewide plan for managing their information systems resource. Of these 29 or 82 percent have created or updated the plan since 1980. Statewide standards and guidelines continue to receive more attention than do operating procedures.

INTERGOVERNMENTAL RELATIONSHIPS

(Tables 16-18)

Previous NASIS reports have speculated on the role that states would play in promoting and assisting the development of information systems at the levels of government. These reports stated that the states would play an increasing role in this type of intergovernmental relationship. One of the goals of this activity was thought to be the development of cooperative arrangements whereby one would find joint systems development efforts and joint use of computer facilities. To date, if the realities of "political considerations" have not obviated such possibilities, they have at least slowed them down.

While there has been an increasing number of states involved in state-local liaison, almost all such activities are in an advisory capacity only. Table 16 depicts the areas of authority and the types of relationships which exist in the states which reported some type of formal relationships with local governments.

Table 17 again outlines those areas of state-local relationships where control is brought about through the overall programmatic relationships rather than those which deal only with the information processing function. Here again there is not a great deal of change from year to year.

STATE-FEDERAL

The level of federal assistance to state information systems development shows a slight increase this year after the sharp reductions in the prior year. Once again the health and welfare programs are the recipient of the lion's share of assistance efforts followed by labor, justice and education.

MANAGEMENT OF THE INFORMATION SYSTEMS FUNCTION

(Tables 19 and 20)

The states continue to make use of software packages for managing the state information system activities. Almost all the packages shown in Table 19 showed an increase in usage with the largest growth in library management, data communications and data base management.

Table 20 is provided to depict the various reports in use for internal management purposes. There is no way the effectiveness of these reports can be measured.

FUNDING AND EXPENDITURES

(Tables 21-23)

Because the data contained in this section must be dealt with very carefully due to variables in governmental structure and organization, policies and statutory requirements, we believe that we must warn the reader that while the funding and expenditures tell us a great deal about the states' information systems activities, we do not believe that this type of information should be reported on an individual state basis. Some states are unable to provide complete financial data and, in any event, the lack of absolute comparability of data between states makes this decision unavoidable.

Method of Funding

The ratio of the use of revolving or working capital funds to a direct appropriation method of financing the data processing function continues to fluctuate around a 60-40 split. While this has remained the average for most of the last 10 years, the method of financing by any one state varies dramatically and in only one year of the last 11 has there not been a total reversal of financing methods going from the 100 percent use of either the revolving fund or the direct appropriation to its exact opposite.

As an overall statistic, averages of the two funding sources reported by states over the last 11 years are shown below.

<i>Year</i>	<i>Number of states</i>	<i>Revolving fund, etc.</i>	<i>Direct appropriation</i>
1972.....	39	49%	51%
1973.....	46	64%	36%
1974.....	45	61%	39%
1975.....	48	61%	39%
1976.....	50	56%	44%
1977.....	50	59%	41%
1978.....	50	57%	43%
1979.....	50	62%	38%
1980.....	50	62%	38%
1981.....	50	59%	41%
1982.....	50	62%	38%
1983.....	50	61%	39%

Expenditures

The rate of growth in data processing expenditures showed a startling slowdown in the data submitted this year with the overall increase estimated to be 4 percent. This probably reflects a number of factors that all came about at the same time; namely reduced hardware costs for comparable through-put, staff reductions, small or no salary increases, and the previously noted sharp reduction in consultant expenditures. Total information systems expenditures were approximately 8/10 of 1 percent of state expenditures or approximately \$2.1 billion. The ratio of data processing expenditures to total state expenditures ranged from a high of 1.5 percent to a low of 0.4 percent. These extremes have remained the same over a number of years.
